Jimmy Green Rope Ladders - Polyester - up to 20 metres

<https://jimmygreen.com/rope-ladders/77982-rope-ladders-polyester-up-to-20-metres>

Jimmy Green Rope Ladders - Polyester - up to 20 metres are produced in house by the Jimmy Green Rigging Team

Components, Design and Construction:

Top Quality LIROS 14mm Octoplait white polyester: article 01047

LIROS Manufacturer Specification: Break Load = 3800kg; Stretch c 15% at working load

Polyester is extremely pliable and durable with excellent abrasion and weather resistance properties

A nylon tear drop shaped thimble is centre eye spliced into the middle of a continuous rope to form the two legs/rails (rope sides)

The rungs are solid beech hardwood with specially machined grooves - 350mm x 30mm diameter

The grooves are located firmly in the lay of the 8 strand octoplait construction rope by the Jimmy Green Rigging Team

N.B. A straight and uniform ladder over numerous rungs is time consuming and requires meticulous skill and methodology

There is an approximate 30cm spacing between rungs

The number of rungs therefore equates roughly to the length of the ladder in feet

The rope tails extend approximately 30cm below the bottom rung

Ladders can be produced to any specified practicable length, due to the design and construction technique
