A Para-Anchor is designed to provide sufficient power to hold the bow of a vessel head to wind in the worst storm conditions. It should be deployed from the bow of the vessel and greatly reduces the risk of broaching, capsizing or rolling, keeping the boat more comfortable and stable throughout the duration of the heavy weather.

Most importantly it allows the vessel to take the storm head on, rather than running with it, which reduces the time spent in discomfort. A must have for any cruising yachtman or long distance sailor.
